### **DETAILED ACTION**

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Omae et al. (5,570,215).

The rejection in Paper No. 6, mailed 4/2/03, is maintained for reasons of record.

#### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Omae et al. in view of Manabe et al. (6,411,355 B1).

The rejection in Paper No. 6, mailed 4/2/03, is maintained for reasons of record.

#### ***Response to Arguments***

5. Applicant's arguments filed 7/9/03 have been fully considered but they are not persuasive. Applicant asserts the structural combination in invention is different from those

taught by Omae et al. and Manabe et al. because it comprises a polarization plate, phase difference plate, liquid crystal layer and selectively reflective layer, specifically, that the references do not teach the selectively reflective layer. Omae et al. teaches a liquid crystal display apparatus composed of a polarizing plate 111 on the incident (or input) side, a liquid crystal cell 112, a phase difference plate 113, and a polarizing plate 114 on the output side in order from the incident light side.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
